

The image shows a screenshot of a software dialog box titled "Filter TL1Event". The dialog box is divided into several sections. At the top, there is a section for "Find NE ID" which includes a dropdown menu set to "Starts With", a text input field labeled "Value", and a checked checkbox for "Case Sensitive". Below this is a section titled "Event Types" containing six checkboxes, all of which are checked: "Unparsed", "Send Raw", "Autonomous", "Received Raw", "Command", and "Acknowledgement". At the bottom of the dialog box are five buttons: "OK", "Cancel", "Select All", "Clear All", and "Help". Handwritten annotations are present on the right side of the image: an arrow labeled "60" points to the "Find NE ID" section, a bracket labeled "64" spans the "Event Types" section, and a bracket labeled "62" spans the bottom button area.
